

ENVIRONMENTAL AND ENERGY POLICY

Campbell Collins Limited is a distributor of electronic components and as such has no significant usage of energy, raw materials and other non-renewable resources. However, we are committed to recycling packaging materials where possible and raising awareness amongst its workforce to identify any other areas of potential environmental waste or damage.

Campbell Collins is committed to the continuous improvement of our systems and processes to minimise any adverse impact on the environment.

Through training and communications, all employees are encouraged to take personal responsibility to minimise their adverse impact on the environment.

We are committed to seeking practical ways to reduce emissions to land, air and water through the responsible management of our business processes.

Environmentally sound practices will be encouraged including material waste, recycling, reduced energy consumption and end-of-life/disposal criteria.

Energy usage will be managed for efficiency and minimal waste through appropriate investment in processes, controls and continuous improvement plans.

We are committed to working with, where possible, suppliers who pursue sound environmental practices.

Jan Campbell
Managing Director
